

## Raise your **Data** to a Real-Time **Platform**

### **Information Services for SAP HANA**

#### **Supercharge Your SAP Analytics**

For organizations looking to position themselves ahead of their competitors, seamlessly connecting and leveraging internal and external data is essential. However, effectively crunching through large volumes of data to find the relationships can be a daunting task. Without the right analytics tools, the process can drain time, money, resources and yield poor results. Moreover, performance problems can further complicate unrestrained access to mission-critical data. Companies all over the globe are looking for a way to leverage their information quickly to drive timely, impactful decisions for their business.

SAP's in-memory computing technology can cut through the big data clutter. SAP HANA is a powerful, intuitive appliance that will accelerate your access to the right information—when you need it—in a flash. Now, your employees can get closer to attaining real-time operational analytics to improve business process and boost time-to-value.

## **Imagine the Possibilities**

While SAP HANA may very well be the answer to your organization's need for real-time data access, high-volume data analysis and big data concerns, you need to be certain before taking the first step. That's where DFT comes into the picture. We offer a comprehensive diagnostic process that will uncover the SAP HANA-readiness of your environment.

Our solution experts will guide you through the use cases, system requirements, associated costs and ultimate benefits with deploying SAP HANA. This suite of services can help lay the groundwork for a smooth transition to the in-memory solution—so your business can hit the ground running:

- Technical Assessment
- Solutions Assessment
- Implementation Services

#### **Technical Assessment for SAP HANA**

DFT's Technical Assessment offers an extensive feasibility analysis for your SAP HANA implementation. In this engagement, DFT will work with your team over a few days to gather insight into your data volumes, real-time needs, and existing infrastructure. With a defined view of your current technology landscape, you'll have a

clearer understanding of whether introducing SAP HANA into your environment is truly the right choice and investment for your organization.

Once we've identified any potential risks and challenges ahead, we'll deliver feasibility findings and outline the recommended next steps.

## **DFT is the Right Choice for SAP HANA**

As one of the first SAP BusinessObjects partners to become certified on SAP HANA, DFT combines its years of SAP BusinessObjects product knowledge with SAP's in-memory technology to fundamentally change the performance, capabilities, and scalability for SAP BusinessObjects customers.

Our joint partnership with SAP enables us to provide an end-to-end solution for SAP HANA. For hardware, software, services and implementation, we offer an unbeatable package and are the go-to SAP HANA experts.

### **Solution Assessment for SAP HANA**

Our Solution Assessment offers a highly beneficial overview of your current information landscape. Over a three to four week period, our DFT consultants will work closely with your staff to take a deeper dive into your business intelligence (BI) infrastructure. This includes assessing your applications, data sets, use cases and any possible gaps in your current environment. With these findings, we will

create a solution blueprint that delivers a high-level outline of business and technology requirements, and a satellite view of the proposed solution architecture. At the conclusion of this process, we'll create an SAP HANA solution roadmap designed to address your company's unique business and technological needs.

### **Implementation Services for SAP HANA**

DFT provides complete end-to-end services for SAP HANA implementations. These services are based on the designs developed in the solution assessment and include, but are not limited to the following activities:

- Integrating with your current infrastructure
- Gathering, analyzing and documenting business and data integration requirements
- Modeling and loading SAP HANA data structures and views
- Designing and building your SAP BusinessObjects front-end solution to SAP HANA
- Mentoring and knowledge transfer to your staff, both IT and business

Take the first step toward accelerating your business performance. Learn how SAP HANA can benefit your organization and supercharge your BI environment.
