

Experience BI Nirvana In 90 Days!

How Well Is Your Company Performing?

- » Do you have **real-time visibility** into your financial operations... P&L, Balance Sheet, Cash Flow, Sales and Operations?
- » Are data silos preventing you from seeing a **global view** of how well you are performing?
- » Are you **spending hours** collecting, moving, reformatting and verifying data in spreadsheets for analysis?
- » Are you tired of receiving performance information so **late** that you couldn't change the outcome if you tried?

Our Suite on HANA Analytics Offering puts you in control enabling you to check the health of your company, in real-time, so you can pin point areas of concern immediately and get back on track quickly.

No more guessing about where you are going to land at the end of the month. Leveraging SAP's self-service analytics and mobile capabilities, you will always know how you are performing and be able to make the appropriate adjustments to hit your daily, weekly, monthly or quarterly targets.

Our solution provides real-time, operational analysis allowing you to interact with and see:

- » High-level KPIs across the company to quickly understand the pulse of the organization
- » Trends over time to visualize the impact of process improvements
- » Comparisons against plan and forecasts to take action and avoid surprises
- » Drill-throughs to detailed information when further investigation is needed

Investment

Pricing is dependent on your current level of investment in hardware and SAP technology. Most customers experience a total investment with this package of between \$250K - \$500K.
